ICSE 2018 Question 6 (a)

(a) Using properties of proportion, solve for x . Given that x is positive:

$$\frac{2x + \sqrt{4x^2 - 1}}{2x - \sqrt{4x^2 - 1}} = 4$$

From the properties of proportion

$$\frac{a}{b} = \frac{c}{d} \Rightarrow \frac{a+b}{a-b} = \frac{c+d}{c-d} \quad - (1)$$

The Given Equation is :

$$\frac{2x + \sqrt{4x^2 - 1}}{2x - \sqrt{4x^2 - 1}} = \frac{4}{1}$$

From (1)

$$\begin{aligned} \frac{2x + \sqrt{4x^2 - 1} + 2x - \sqrt{4x^2 - 1}}{2x + \sqrt{4x^2 - 1} - 2x + \sqrt{4x^2 - 1}} &= \frac{4 + 1}{4 - 1} \\ \Rightarrow \frac{4x}{2\sqrt{4x^2 - 1}} &= \frac{5}{3} \\ \Rightarrow \frac{6x}{5} &= \sqrt{4x^2 - 1} \\ \Rightarrow \frac{36x^2}{25} &= 4x^2 - 1 \\ \Rightarrow 1 &= (4 - \frac{36}{25})x^2 \\ \Rightarrow x^2 &= \frac{25}{64} \\ \Rightarrow x &= \pm \frac{5}{8} \end{aligned}$$

But Given x is positive

$$\Rightarrow x = \frac{5}{8}$$
